Overview

Choose-Your-Own-Adventure
styled game utilizing AI to
generate plot and scenarios
based off of an initial
hardcoded prompt

DistillGPT →
Google Gemini
Flash 2.5

API Set-up

Generate free API Key in Google AI Studio

Create environment variable on local machine with API key

Set up code in main or designated api.py file

```
import os

from google import genai

API_KEY = os.getenv("GEMINI_API_KEY")
client = genai.Client(api_key=API_KEY)
chat = client.chats.create(model="gemini-2.5-flash")
```

File Structure

CLlrpg

- \api.py
- \main.py
- \prompts.py
- \requirements.txt

Responses

Responses are generated from an initial prompt in prompts.py

```
D PS C:\Users\tsuko\PycharmProjects\CLIrpg> python main.py
```

```
rid stench of dragonfire still hangs heavy in the air, a cruel counterpoint to the city's usual perfume of baking bread and bustling markets. Just hours ago, a shadow blotted the midday sun, followed by a scream that wasn't human, and then the earth-shattering roar. Now, a gaping maw of ruined stone and smoldering timber scars the heart of Eldoria's central square, a monument to the dragon's wrath. The city guard is in disarray, citizens scramble for safety, and the distant cries of the wounded mix with the urgent shouts of those trying to organize a defense. This isn't the grand return you envisioned, but duty, or perhaps just a desperate need to help, pulls you into the chaos.
```

```
you can even consider the true scale of the devastation, you must decide how you will face this encroaching terror. What path have you chosen to walk in this world?
```

```
2
```

```
Mage:** Wielding ancient arcane secrets, your power comes from intellect and elemental manipulation. You are fragile, but your spells can turn the tide of battle from afar.
```

```
Warrior:** Clad in steel, your strength and resilience are your greatest assets. You stand on the front lines, a bulwark against any foe, relying on blade and shield.
```

```
As you grip the familiar hilt of your sword, the cold steel a reassuring weight in your hand. Your shield, emblazoned with a personal, unheralded crest, feels like an extension of your body.
```

```
The roar of the dragon may have faded, but the echoes of panic and the cries of the injured are deafening. Smoke billows from shattered buildings, and debris litters the street, making passage difficult. You can see members of the city guard, disorganized and frantic, trying to evacuate people while also dealing with collapsing structures.
```

```
It's up to you in your choice:
```

```
As a warrior, your instincts, honed through countless spars and skirmishes, scream for action. You are a shield, a bulwark, a blade against the encroaching darkness.
```

```
Suddenly, a massive section of a building's outer wall groans ominously, threatening to collapse onto a group of terrified citizens - a mother clutching her child, struggling to move, and a young boy frozen in fear. Just beyond them, further down the street, you hear the unmistakable clang of steel on steel and frantic shouts. It's a chaotic skirmish, perhaps with lesser beasts stirred by the dragon's attack, or even opportunistic brigands taking advantage of the chaos.
```

```
What do you do?
```

1. ****Rush to protect the trapped citizens:**** You could try to hold up the collapsing wall with your shield or clear a path for them, risking your own safety but saving lives directly in front of you.
2. ****Head towards the sounds of combat:**** Your training calls you to the fight. You could reinforce the struggling city guard or confront whatever new threat has been lurking, possibly preventing further harm.
3. ****Try to find a way to organize:**** The city needs leadership. You could try to find a high-ranking guard captain or clear a route for better coordination, helping to bring order to the chaos.

```
Type 1, 2, or 3.

prompts.py

```
main.py  prompts.py ×  api.py  requirements.txt
1  initial_prompt = """let's play a Choose Your Own Adventure game.
2  The game should have an engaging storyline, multiple branching
3  paths, and meaningful choices that affect the outcome. Follow
4  these guidelines:
5  Setting & Theme: A medieval fantasy world with vast kingdoms
6  and monsters such as dragons roaming the land. The capitol was
7  just attacked by a dragon as the adventurer begins their story.
8  Character Role: The character will be an adventurer,
9  able to choose between a mage, a warrior, or a ranger.
10 Story Structure:
11 Start with an intriguing introduction.
12 Provide 2-3 choices at key decision points.
13 Ensure different choices lead to unique consequences.
14 Offer multiple endings (good, bad, secret, etc.).
15 Writing Style:
16 Keep the tone immersive and engaging.
17 Use second-person perspective ("You find yourself in...").
18 Game Flow:
19 Clearly label choices (e.g., "Type 1 to go left, 2 to go right").
20 Ensure the story loops back when needed.
21 Extra Features (Optional):
22 Add puzzles, riddles, or challenges.
23 Introduce an inventory system or character stats.
24
25 Start with the introduction and the first choice, then
26 continue the story based on player input.
27 """
```

Key Takeaways

Developed a better understanding of LLMs

Created the base structure for a more advanced and in depth later version

Better grasp on the implementation of API's and Environment Variables
